in Halls A, B and D

■ The following new products and services are offered in the technical exhibit areas. Consult the RSNA *Technical Exhibition Guide* for the booth number and location of each company.

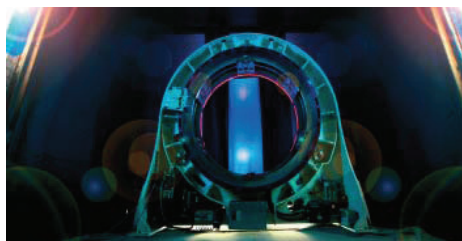

Breast MR Interactive DVD Lectures

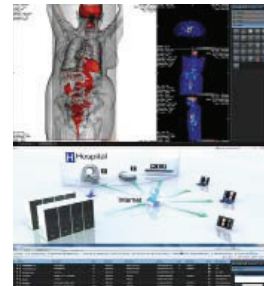

Proscan offers a new breast MR lecture series that reviews breast MR theory and techniques and teaches the MR imaging appearances of common and rare malignant and benign lesions.

This professionally produced, interactive DVD series features lectures covering the fundamental techniques of MR mammography and teaches diagnosis and interpretation. It also helps physicians understand how MR best fits into the diagnostic algorithm for breast care. Breast MR is reported as valuable in detecting cancer in women who have a personal history of breast cancer, those patients with greater than 25 percent lifetime risk of breast cancer and those with dense breasts. MR imaging helps to show the extent of disease in patients diagnosed with breast cancer.

Cost-effective Economic Slip Ring

Zero-footprint Imaging Suite

KJAYA Medical debuts its fully intelligent-cloud-based VoXcell imaging suite complete with RIS, PACS, image archiving and communication functionalities, plus a full range of advanced visualization tools, accessible through a Web browser. For the first time, medical facil-

ities can manage all imaging workflow enterprise-wide and beyond using robust industry standard applications, advanced 3D processing, PET/CT viewing and more, with anywhere anytime Internet availability. Now, digital image management has no in-house hardware requirement except a Web-enabled PC. With software purchases, downloads and IT maintenance eliminated, VoXcell offers immediate connectivity for flexible image sharing.
